Exercise 1

• Install Git client

We Installed Git Successfully.

Exercise 2

- Start git BASH UI
- Create a folder (labs1) and set it as default folder
- Init local repository (\$git init)
- o Create a file with following content:

aaaaaaaaaaaaa

ccccccccccc

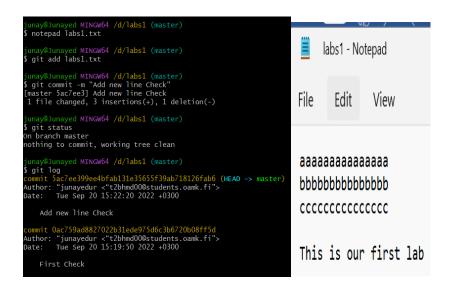

o Name the file as labs1.txt

o Add and commit the file to local repo

```
y@Junayed MINGW64 /d
mkdir labs1
junay@Junayed MINGW64 /d
$ cd labs1
                                                                                        labs1 - Notepad
 unay@Junayed MINGW64 /d/labs1
$ git init
Initialized empty Git repository in D:/labs1/.git/
 unay@Junayed MINGW64 /d/labs1 (master)
 notepad labs1.txt
 unay@Junayed MINGW64 /d/labs1 (master)
                                                                              File
$ git status
                                                                                             Edit
On branch master
No commits yet
Untracked files:
 (use "git add <file>..." to include in what will be committed)
nothing added to commit but untracked files present (use "git add" to track)
 unay@Junayed MINGW64 /d/labs1 (master)
                                                                               aaaaaaaaaaaaaa
§ git log
fatal: your current branch 'master' does not have any commits yet
 unay@Junayed MINGW64 /d/labs1 (master)
                                                                               git add labs1.txt
$ git commit -m "First Check"
[master (root-commit) Oac759a] First Check
                                                                               CCCCCCCCCCCCCCC
1 file changed, 3 insertions(+) create mode 100644 labs1.txt
```

Exercise 3

- o Add a new line in end of the file
- o Add and commit the file to local repo
- o See commits: \$git log

Exercise 4

- o Give command \$git status
- o Then make change to file and give the command again
- o Add and commit the file to local repo and give command again
